Burg Hill Ohio

PLEASE READ CAREFULLY BEFORE ORDERING

ORDER EARLY — It avoids disappointment by eliminating the chance of the variety selected being sold out. However, we do not discriminate, our prices are the same in the spring as in the fall. Our stock is always guaranteed, early or late, our large storage facilities permit this.

GUARANTEE—I ship only first quality stock which grows easily, it is clean, insect pest and disease free, healthy and true to name. Every bulb is fully guaranteed as such. Should any prove otherwise, I will gladly replace or refund your original purchase price.

SUBSTITUTION — I do not substitute unless directed to do so. However, a second choice is advisable if late in the season.

SIZE—Our bulb sizes are standard and liberal.

Large —1¼ inches or more in diameter (Nos. 1 and 2).

Medium—¾ to 1¼ inches in diameter (Nos. 3 and 4).

Small —¼ to ¾ inches in diameter (Nos. 5 and 6).

QUANTITY—3 bulbs will be sold at the 10 rate; 25 at the 100 rate; 250 at the 1,000 rate.

SHIPMENTS—Weather conditions govern this largely. They usually start about March 15th. Unless otherwise directed.

DELIVERY—All orders amounting to \$1.00 or more will be delivered free to all parts reached by Parcels Post. Orders amounting to less than \$1.00 will add 15c for postage.

SALES TAX—Only orders from Ohio—which are not for resale of bulbs or flowers, will add 3% sales tax.

TERMS—Remittances should accompany your order, and should be made by check bank draft, American Express or Postal money order.

REFERENCE—For our standing, you may refer to:

The McDowell National Bank of Sharon, Pa.

PRICES—having a number prefix, as **2-.05**, means **2 for 5 cents**.

Prices as given in this catalog supersede all previous quotations.

SERVICE—As we are one of the largest producers of gladiolus, we offer the best, with courtesy, being fully appreciative of your patronage.

INSPECTION—Our stocks are federal and state inspected.

BULB PERFORMANCE—For the maximum performance or exhibition spikes— **Large** (over 1¼") are much to be preferred.

Medium (¾ to 1¼") bulbs are of blooming size but the flower is not as large and requiring more time to bloom;

Small (¼ to ¾") bulbs will at times bloom late in the season and are noticeably smaller in size; **Bulblets** cannot be depended upon, either to bloom or for germination, many fail to grow under the very best of conditions.

MAJOR EDWARD BOWES

“Overwhelmingly Beautiful”

This variety, one of our introductions this year and illustrated on the front cover, has been named for our most genial friend, Major Edward Bowes and with his kind permission.

It was my privilege, Sunday evening, August 29, 1935, to have Stewart Gladiolus, which were sent direct from our gardens, decorate the stage of Radio City, New York, for the Major Bowes Amateur Hour, sponsored by “Chase and Sanborn Coffee.”

The Major very kindly acknowledged the “lavish” display and its sender over the air calling particular attention to the large basket of the variety which we had named for him.

“Overwhelmingly Beautiful”

Is the way the Major expressed himself when he received a large bouquet of this new variety, which we forwarded to him as a prelude to the above event.

The Major Edward Bowes variety is one that you can enjoy fully, as it is of vigorous growth, healthy and a massive plant. The flowers are large, a bitter-sweet pink with an overlay of a slightly deeper tone, the small pinard yellow throat adds much to the attractiveness and beauty of this variety. The spikes are very tall and strong, built to carry well the many flowers that open at one time, up to 12. An excellent propagate and a variety that will surely become very popular.

Our introductory price on Maj. Edward Bowes is very attractive for such an outstanding variety.

ANY SIZE BULB— \$10.00 EACH. If you have a preference of size, please suggest it, and we will gladly comply with your request in so far as it is possible. A limited number of select BULBLETS will be released at \$10.00 for three.

Phyllis McQuiston

Phyllis McQuiston

It has been freely predicted by those who have grown this beautiful variety and by those who have seen it in our gardens or on display at the shows, that it will easily be among the highest in the National symposium in a comparatively short time. We have received many very fine letters which are truly complimentary on this variety, their praise has been unstinted—“It’s gorgeous” is invariably the exclamation “Phyllis McQuiston” brings forth.

The large flowers of this variety are a perfectly clear and glowing pure pink, with a light throat. The spike is excellent, tall, strong and erect carrying consistently 18 to 20 buds with five or more flowers open at one time. The plant is particularly healthy and a strong grower. Bulblets are produced in abundance and are easily germinated.

PHYLLIS McQUISTON

Excellent Commercial

This variety is most consistent in the production of its fine spikes, the flowers hold up wonderfully under heat and are perfect shippers. Planted here in early May, they bloom the latter part of August. The blooms of this variety have brought premium prices this past season, and growers have been enthusiastic about its performance.

For greenhouse forcing this variety has no pier. It is excellent, is the comment of the growers. The success of Phyllis McQuiston as a leading commercial is assured.

You too will enjoy and profit with this new pure pink of our origination. Your order, as do all of your orders, will be carefully and courteously executed. Prices are—

Large, each \$1.00; Per 10, \$8.00. **Medium**, each 60c; per 10, \$4.80. **Small**, each .35; per 10, \$2.80 **Bulblets**, 3 for .20, 25 for \$1.00, 100 for \$3.00. **Quantity prices**, see page 38.

Our Introductions for 1936

In addition to the variety Major Edw. Bowes, we offer two more meritorious varieties for the first time. They will, I feel, meet with your hearty acceptance as well as the Major, as truly worthy and beautiful flowers.

ELSIE ADELE — Has that natural appeal of feminine youth and beauty; it is a perfectly clear, soft, blush LaFrance pink, the spikes are tall, always carried erect and graceful, five or more flowers are open at one time with 18 or more buds. The plant is clean and healthy, the bulblets are produced in quantity and germinate well. A real beauty and will receive a warm welcome, I am sure. **Bulbs**—Large or medium \$5.00 each. **Bulblets**, \$1.00 each.

BLUE BIZARRE — The under color of this variety is a light blue, long streaks of medium blue overlay much of the flower, these are again overlaid with dark blue, very pronounced and effective. The plant is strong and healthy and a good producer. Spikes are medium tall with medium sized flowers. The immense interest shown in this variety here in our gardens and at the Ohio State Show this past season would indicate that this variety too would soon be among the popular novelties. The flower is all that the name implies.

Bulbs—Large, \$5.00 each; **Medium**, \$4.00 each; **Small**, \$3.00 each. **Bulblets**— \$1.00 each.

Our Introductions of 1935

These varieties have received a real welcome, even greater than did our previous introductions, the many letters of praise from those who have grown them, amateurs, connoisseur and grower alike, speak most emphatically of the true value of our originations. We are confident that our varieties being offered to you this year for the first time will be received equally well.

ALICE HERRIOTT. A beautiful shade of rich cherry-rose, with just a cast of blue to the upper throat. The eight or more large flowers open at one time are nicely placed on a tall, always straight strong spike, carrying 18 or more buds. A good grower and certain to become very popular.

Large each \$3.50	Medium each \$2.80	Small each \$2.00	Bulblets each \$.60
per 10 \$30.00	per 10 \$22.40	per 10 \$16.00	per 10 \$4.80

ELITE. The florets are gracefully waved and large, which materially adds to the beauty of this distinctive salmon-pink to peach-red flower, with its creamy Neopolitan throat and median lines. The spike is very tall and strong with 18 or more buds, eight or more open flowers. A fast propagator and a particularly valuable new variety.

Large each \$3.00	Medium each \$2.20	Small each \$1.40	Bulblets each \$.50
per 10 \$24.00	per 10 \$17.60	per 10 \$11.20	per 10 \$4.00

MARGARET STEWART. This is a most beautiful shade of rich red-red-rose and practically a self color. A tall, strong spike carrying 16 or more buds with four or more large open flowers. A particularly meritorious variety.

Large each \$3.00	Medium each \$2.20	Small each \$1.40	Bulblets each \$.50
per 10 \$24.00	per 10 \$17.60	per 10 \$11.20	per 10 \$4.00

Our earlier introductions, Euclid, Totem, Colfax, Precious and Village Queen will be found in their alphabetical order in this catalog, and Phyllis McQuiston will be found on page 4.

Our Originations

It is necessary, before offering a seedling for your approval, to grow and subject it to the long process of elimination, selection and reselection, its merits summed, among other features must include real beauty it must be able to produce consistently a good spike, erect and strong, one that carries the flowers well, with the ensemble in perfect harmony and graceful; it must be healthy, of vigorous growth and capable of healthy reproduction. And such are the standards of our originations. They must be able to perform perfectly for you, and you will find each one carrying a special beauty all its own.

SPECIAL COLLECTION OFFERS

OF OUR ORIGINATIONS

The increase in popularity of our new originations, suggests that we offer them in collections, attractively priced, making them more available for the home garden and an even greater popularity. Avail yourself of this opportunity and save.

THE GLADIOLUS

To realize, at least to some extent the important part the Gladiolus is playing in the ever increasing interest and popularity of the Garden Club movement, one needs but to attend a flower show to learn that the Gladiolus is taking the leading role among the flowers, in most sections. We are confident of its beauty, grace and ability to take the part and hold it.

The present position which our flower is holding is an enviable one and has been made possible by the untiring activity of the Gladiolus Societies, in holding Gladiolus Shows with the Garden Clubs cooperating; our societies have been very active over a period of many years in disseminating valuable information of all kinds to its members thru their publications and otherwise; in publicity work for our flower and in many other ways, the Secretary (manager) being the only one compensated for service rendered.

To continue this invaluable work, to maintain and if possible improve the position of our flower, these societies need your support in this truly worthy cause.

I invite you, yes and cordially, to join one of the societies, enjoy their benefits and participate in their shows.

These two major societies offer publications free with membership: The American Gladiolus Society, Monthly publication, Gladiolus Review. Sec. Roscoe Huff, Goshen, Ind.

The New England Gladiolus Society publishes The Gladiolus Year Book, Sec. G. Edgar Folk, Oakdale, Mass.

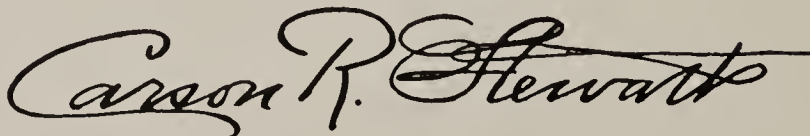

Many of the following State Gladiolus societies and Horticulture societies publish monthly or quarterly bulletins:

Empire State, New York
Pennsylvania
Rutledge, Pa.
New Jersey
Connecticut
Maryland
Ohio

Indiana
Iowa
Michigan
Wisconsin
California
Minnesota
Mahoning

There are many other societies and clubs, each doing active work and surely worthy of support.

Cordially,

President American Gladiolus Society
President, Natl. Com. Gladiolus Growers Assn.
Member New England Gladiolus Society.
Member Ohio State Gladiolus Society.

SPECIAL VALUES IN COLLECTIONS AND ASSORTMENTS

*They Are Unsurpassed in Quality and Are
Attractively Low in Price*

Assortments

Those who do not care to grow the varieties separately and by name, but who do want the very best of flowers, will find the following assortments will more than satisfy. We do not grow a mixture. These assortments are made up FOR YOU. If you have a preference for any particular color, we will be happy to put forth every effort to meet your request. The very large number of varieties which I grow are representative of the best efforts of the leading originators from all over the world. This enables me to offer you ASSORTMENTS THAT ARE UNEQUALLED in wide color range, choice varieties and quality stock. This includes plain petaled, ruffled and other types of flowers. The various varieties are NOT labeled as to their names. Please order by number.

No. 1. This is our most popular assortment, all large flowers. We have large numbers of complimentary letters on this collection. It will please you. Over 40 different varieties. 100 "L" bulbs, \$2.40; 50 "L" bulbs, \$1.30; 25 "L" bulbs, 80c.

No. 2 Primulinus. This assortment contains about 30 different varieties of this artistic type. The color range is very wide and includes plain and ruffled petaled varieties. For those who prefer this type which is so desirable for table decoration, this assortment cannot be equalled at this very low price. 100 "L" bulbs, \$2.40; 50 "L" bulbs, \$1.30; 25 "L" bulbs, 80c.

No. 3. This assortment is the same as No. 1, except that it has many of the newer and higher priced varieties. A real value. 100 "L" bulbs, \$4.25; 50 "L" bulbs, \$2.20; 25 "L" bulbs, \$1.20; 12 "L" bulbs, 80c.

Medium size bulbs of the above offers at one-half the price.

Collections

These include excellent varieties, exhibition and other types, and carry our strong guarantee. They are made up to give YOU a WEALTH of COLOR in YOUR GARDEN. Please order by collection letter.

No. A. Total of 22 very popular varieties in this collection:

AFLAME—Flame Pink.
ANNIE LAURIE—Light Pink.
A. ANTONETTE—Salmon-Rose.
BOLD WINNER—Novelty.
CATHERINE COLEMAN—Coral pink
DIANA—Scarlet.
EMILE AUBURN—Dull Rose.
GLORIANA—Sal. Saffron.
GOLDEN DREAM—Deep Yellow.
HELEN HOWARD—Amber.
HIGH NYE—Old Rose.

J. T. PIRIE—Mahogany.
K's YELLOW WONDER—Light Yel.
MRS. J. K. ARMSBY—Sal. Pink.
MRS. LEON DOUGLAS—Large Pink.
MRS. P. W. SISSON—Cameo Pink.
PERSIA—Dark Maroon.
PUREST OF ALL—Pure White.
PRIDE OF WANAKA—Rose.
SIDNEY PLUMMER—Cream.
TYCKO ZANG—Pink.
VIOLET BEAUTY—Violet.

22 Large Bulbs—1 of each variety, correctly labeled.....\$1.00
66 Large Bulbs, 3 of each variety, correctly labeled.....\$2.80
110 Large Bulbs, 5 of each variety, correctly labeled.....\$4.40

Medium size bulbs of the above at one-half the price.

Collections

No. B. Total 16 varieties, all are beauties.

ALBATROSS—White.	MRS. VON KONYNENBERG—Blue.
COLOR BEAUTY—Rose.	PURPLE GLORY—Maroon.
CRINKLES—Ruffled Pink.	RAJAH—Deep Red.
H. H. GROFF—Salmon Red.	RITA BECK—Soft Pink.
J. H. McFARLAND—Bronze.	ROSALIND—Rose Red.
MARGARET FULTON—Pink.	RUFFOLACE—Ruffled White.
MINUET—Lavender.	SALBACH'S—Pink.
MOTHER MACHREE—Smoky.	TIGER KING—Novelty.

16 Large Bulbs—1 of each variety, correctly labeled.....	\$1.00
48 Large Bulbs—3 of each variety, correctly labeled.....	\$2.80
80 Large Bulbs—5 of each variety, correctly labeled.....	\$4.40

Medium size bulbs of this collection at one-half the price.

No. C. Total 14 bulbs, all are very good.

ANTIONE—Deepest Yellow.	JOERGS WHITE—White.
CHARLES DICKENS—Violet.	LAVENDER DELIGHT—Lavender.
CLASSIC—Salmon Rose.	MAUVE MAGIG—Mauve.
COM. KOEHL—Scarlet.	MISS GREELEY—Salmon Pink.
GOLD FINCH—Yellow.	MRS. Dr. BEEVAN—Cream.
HELEN M.—LaFrance Pink.	RAMESSES—Maroon.
H. H. GOLDSTEIN—Old Rose.	WONDER GLORY—Golden Cream.

CARE AND CULTURE

THE GLADIOLUS can be successfully grown in practically any part of our U. S. They are easily grown and respond wonderfully to a little attention, such as timely watering and cultivation. They will adapt themselves to most any garden and will be found doing much better than most flowers with an equal amount of effort by the grower, be they amateur or professional.

THE PACKAGE when received should be opened at once to admit air directly on bulbs—store in cool, dry and frost-proof place until planting time.

SOIL—Any good garden soil is very satisfactory; it is important that the soil should not be worked when wet, and should be kept pliable at all times during the growing season.

LOCATION—They will not do their best in too much shade. They enjoy being planted in rows or in beds; they are valuable in the landscape, putting clumps of all one color or mixed at suitable points for the desired effect. The ground should be well drained for best results.

DISINFECTING—Precautionary measures guarding against insect pests and bulb troubles are very effective and most economical. The garden should be cleaned and the old tops of gladiolus as well as the tops of other plants and other refuse should be raked up and burned. The storage room should be clean and disinfected as well as the bulb containers before using them to store bulbs over winter. Disinfecting all bulbs before planting is an easy task and is advisable as it will practically eliminate any disease or insect pest. I offer but one method: this accomplishes all in one operation; use at the rate of one ounce of Bichloride of Mercury poison to 10 gallons water (B. of M. is more soluble in warm water), soak from 8 to 10 hours, the night before planting, (not necessary to remove husks); they may be planted wet. Use non-metallic container for the B. of M.

PLANTING—Have soil loose; make trench or hole deep enough so that bulbs can be covered with three inches of dirt, (sandy soil, five inches); plant bulbs three inches apart in the row. If fertilizer is used at planting time, keep at least two inches from bulb, by covering bulb with dirt before adding the fertilizer.

WATER and CULTIVATION—Water thoroughly so that it will soak down to the bulb, at least once a week, but count a good rain as one, cultivate thoroughly next day if not sticky.

THE FLOWER—If you wish to cut the flower do it when the first flower opens wide, to get a nice spike with it, slide the knife down close to spike on one side, stopping six to eight inches from ground, then slide it down the opposite side giving knife a twist at the bottom to remove spike with flowers; this operation cuts leaves from spike but they remain on the plant, which is essential to properly mature the bulb.

CROOKED SPIKES—These are frequently caused by permitting the spikes to lean at an angle, nature will then start the upper portion of the spike to grow straight up again which gives it a crook; the leaning comes from wind, heavy rain, buds, etc. A warm night after a rain or heavy watering produces ideal growing conditions. A spike of a very fast growing variety will grow from one to three inches under such conditions, producing naturally a soft growth, which should have two or three days to strengthen. However, if a "hot" sun strikes this growth the next morning it will soften and sag, only to start growing erect again in the cool of the evening, and leaving the crook in the spike.

HARVESTING—Bulbs should be ready to dig three to six weeks after blooming or dig when foliage starts to turn brown. Loosen bulb with fork or other tool and bulb will lift out by the top—shake dirt off—cut tops off close to bulb, let bulb fall in clean container (three inches deep), pile up tops for burning. Let bulbs cure three to six weeks in a dry, airy, frost-proof place, stir occasionally for thorough drying—they must be dry. When ready, the old root should snap off easily, leaving bulb clean; now store away for winter in containers (boxes or bags) not over four inches deep, in a cool, dry, frost-proof place.

Our stock is guaranteed clean, healthy, thrip free and true to name

FORCING GLADIOLUS

The many requests we receive for information of various kinds on "forcing" gladiolus has prompted us to offer it in our catalog. We have for many years, supplied bulbs for (greenhouse growing) forcing—this has been a very large part of our business and we have enjoyed healthy progress. This progress is due almost entirely we believe to the quality of stock we send out and the varieties we recommend for forcing. Our quality has been grown, dug and cured, using the most scientific equipment, methods and operations that only years of study and experience will produce. Our experience in producing excellent stock for forcing has been materially aided by the fact that we ourselves grow glads under glass. In the Spring of 1935 we grew over 225,000 for cut-flowers—this does not include our large number of varieties planted in trial beds. Of equal importance to the quality of stock, is the selection of varieties for forcing. One trial is not sufficient proof of a variety being a consistent producer of good flowers nor is a variety good because it is new, nor are all old varieties undesirable. It is therefore with confidence that we offer our suggestions and recommendations as being particularly helpful to those forcing Gladiolus.

CULTURAL DIRECTIONS—SOIL, FERTILIZERS AND PLANTING

Our first plantings (in Northern Ohio) are made January 20. We plant from then up to February 20, which will carry our blooming period into early July; at this time the first of the outside stock should be ready, then, too, this is an opportune season to prepare benches for your other crops. We have not met with much success planting earlier than this.

January and February are as a rule rather cloudy and even our Jan. 20 planting was materially slowed up this past season because of the scarcity of sun light. The sun light in my opinion is a necessity; so beware of even partial shade from trees, sheds or walls.

Real success is much more certain of attainment when the previous crop has been completely removed and the soil thoroughly worked. If soil is good, the addition of fertilizer is not necessary, however, it is desirable to have the soil of a slightly acid test. This may be attained easily by the addition of sulphur phosphate. Add about 1 lb. to the square yard, assuming that your soil is of the proper depth, which incidentally it should be. Average soil depending upon its fertility can stand about 2 lbs. of super phosphate, or about 2 lbs. of bone meal or 2-12-6 fertilizers, where the soil is in need of it. NOTE: Do not use nitrate or any fertilizer that contains nitrate on good soil, and not over 2% on average soil. Gladiolus do not want an over-rich soil.

In planting, the bulbs should be spaced not closer than 6x6, that is rows 6" apart and 6" in the row; many failures come from crowding the planting. The bulbs should be covered with not less than 2" of dirt; the spike of bloom comes through the new bulb; it in turn is formed on top of the old one, and has a larger spreading root system, hence depth is required.

Gladiolus will need strings or wire. If your previous crop was wired leave them, if convenient, as they will do. If new is used have it about 24" high. This will facilitate the cutting. Frequent cultivation is very important; the soil then keeps in perfect condition. Frequent watering is also important. Soil should never be permitted to become dry or to show the signs of poor drainage and ventilation. A temperature of 50° F. should be kept for at least two weeks after planting. This permits of the much required root growth before the spike starts. It is entirely possible to grow six or more inches of top without root development, but it is most undesirable if you want good flowers. The temperature after the first two weeks should be raised gradually to 65° F. Too much heat and more especially at the outset will produce tall, spindly, weak plants.

If maximum results in flower size are desirable and profitable, an application of liquid nitrate when watering will be very helpful. It should be done when the spike is well formed or about ready to show color. In using nitrate at this time your spike will not be inclined to go spindly or weak and the flower will be fed just when it needs it. The weak spike always produces poor and weak flowers and only a few buds to a spike.

I have stated that the best results are obtained by removing entirely the old crop before planting gladiolus. However, it frequently happens that the old crop is not quite through and it is time to plant the gladiolus; we have had very desirable results planting between rows of snapdragons, carnations, etc., spacing the

bulbs 6" apart in the bulb row, later removing the old crops as soon as possible. In fact some of our trials have permitted us to cut very desirable glads in early June and still be getting stragglers from the previous crop. However, this is not recommended.

The Gladiolus in this section when forced to come in during the latter part of May through June and up to early July, when other flowers are scarce, has proven a most valuable crop. However, even this season is no exception. The quality must be there; the florist will then be proud to send them out and there is no trouble disposing of them and at a profit.

In this section the value of lean-to cold frames can hardly be over-estimated and we know of no more valuable crop than the gladiolus to use in them. We plant in early March and always cut an excellent crop at an opportune time, namely, late June and early July, just as those from the houses are finishing up. We have been unable to find a case where bulbs from some remote state grown in sand and early harvested have in any way proven superior to our own in appearance or in the production of high class cut flowers. We are not alone in this opinion. Our Departments of Agriculture are of the same opinion and add that the best bulbs are grown on a good loam soil. This fact no doubt accounts for much inconsistent advertising to the contrary.

Where there has been thrip, a thorough disinfection of the houses is necessary; in treating bulbs Bichloride of Mercury is one of the best methods and comparatively simple in operation compared to many. However, all forms of mercury treatment has a tendency to slow up the blooming date a trifle. Close watch should be kept of the young plants when from six to ten inches high; if thrip show, this is the time to control them and not when the plant has its full growth—for this, ROTOTOX has proven very effective.

VARIETIES

A full color description will be found in the General List for each variety. We offer a list of desirable varieties for forcing under two headings, Good and Mediocre. Under the heading of Mediocre are many varieties that force quite well that have come into general use partially because there is not a variety better in its color class or low enough in price; there are varieties that have shortcomings in both classes, as perfection has hardly been attained. However, improvements are very noticeable in many of the newer varieties. Under the heading of Good are included only such varieties as are dependable and force easily, producing the best of flowers on equally good, strong stems. We strongly recommend No. 1 size with No. 2 a second choice. Smaller sizes do not force well and require longer.

WHITES—Among the whites Albatross is no doubt the best, a fine pure white and early on a tall spike—lily-like flowers, and very well liked. Joerg's White has a noticeable throat mark, grows a strong spike and produces very good flowers. Maid of Orleans, a creamy white, is rather high in price this year and is therefore not catalogued—it will, however, be one of the best; it forces very well. Albania is still asked for by many for their white, but is short with a blush of pink at times. Carmen Sylva is not as consistent in producing good spikes as some, but they are some taller than Albania. White Butterfly, a primulinus, is a nice soft white, small flower and willowy stem which some like in a limited quantity. Tiffany—creamy white, a little short with medium sized flowers.

LIGHT PINKS—Betty Joy—very delicate light pink that forces nicely, producing a very desirable spike. Break O'Day—early soft pink and cream, tall willowy spike, one that is generally well liked and dependable. Giant Nymph—soft rose pink with cream throat; an old favorite. Los Angeles—tall pink that is very consistent in producing its spikes and flowers under glass and still well liked. Mrs. P. W. Sisson—a beautiful cameo pink with large flowers, strong spikes and very popular. Annie Laurie—a beautiful refined light pink; grows rather short with small flowers. Phaenomen—an early pink and delicate cream primulinus, not as dependable as some nor as tall, but nice. Rita Beck—light pink, strong spike of large flowers, forces but mediocre, otherwise a very desirable variety. Yvonne—an early large light flower practically white with rose throat marks, only fairly dependable as a forcer.

MEDIUM PINKS—Phyllis McQuiston—pure pink, large flowers on an always tall, erect spike, very dependable and one that is certain to become most popular and widely known. Picardy—shrimp pink, large flowers; the spike is tall, strong. This is one of the most popular. Mildred Louise—strawberry pink, tall with large

flowers, and another very desirable variety. Sheila—early salmon pink—not as tall as the three foregoing varieties, but not a short grower—very consistent and has been used as a forcer for years.

PINK-APRICOT—Betty Nuthall—very popular though late, produces tall erect spikes consistently, with warm apricot to pink flowers, one of the best and enjoys a real popularity. Apricot Glow—tall apricot on willowy spikes, nice sized flowers, a very desirable shade and has a large use as a forcer, but does better in the cold frames. Ming Toy—an old variety that falls in the same class and habits as Apricot Glow—the former is to be preferred. Gay Hussar—strawberry pink to orange, good sized flowers on a medium tall spike, a strong color combination and quite popular. Nancy Hanks—pink, orange and apricot blendings on a medium sized spike. Helen Howard—pink to amber; nice sized flowers on tall spike—only fairly consistent in its production.

LAVENDER—Minuet—the best shade of lavender, continues to hold its position as the leader, nice sized spikes with large flowers. Eearly Melody—a new variety that is not as clear in color as Minuet, but early and a very fine lavender to pink; large flowers on tall and erect spikes; a very easy forcer and very dependable. This variety has met with easy acceptance and will be one of our leading commercial varieties. Dr. Moody—a nice shade of lavender on a strong spike, is not as dependable at times, producing its flowers in bad form. Opalescent—lavender pink flowers of fair size on a strong wiry spike, not as dependable as it should be, but has been in use for several years.

YELLOW—Yellow Wonder (K)—early light yellow, good sized flowers on a strong, willowy spike, well liked and forces very well. Yellow Favorite—with habits very similar to Yellow Wonder, but is a diffused yellow with deeper throat of a brown caste. Golden Frills—very early, clean nice yellow with sharp small scarlet mark in throat—ruffled and one of the very earliest to bloom. It is primulinus, small flowers and short grower, but forces easily and a good producer, being one of the first to bloom, the variety is still valuable and popular. Gold Eagle—very early, tall heavy forcer with small flowers that do not open wide, very early and many thousands are forced every year. Golden Dream—a late tall strong yellow, these flowers do not open very well; it is, however, forced in quantities. Golden Glow—has very similar habits to Golden Dream, a little lighter in color and opens a little wider with similar habits.

ORANGE-RED—Orange Queen—early and a very nice shade of orange, a primulinus producing nice willowy spikes, grown extensively and popular. Dr. Bennett—an excellent color, large bright scarlet flowers, fine spike and can be forced most successfully, the most popular red. Commander Koehl—a large scarlet—not as clear as Dr. Bennett, on a strong spike, one of the newer ones doing nicely. Dr. Nelson Shook—rose red—heavy growth—does fairly well as a forcer. Copper Bronze—the name implies the color of this primulinus, produces its strong, slender spikes easily and is grown in quantities—being one of the older varieties.

PURPLE-NOVELTY—Charles Dickens—purple violet, grows well, tall willowy spikes. Troubador—clear purple, strong spikes and forces quite well. Mother Machree—a blending of neutral shades with lavender and cream, a desirable novelty color, tall spikes that force quite well and is being used more each year.

ASSORTMENTS—We do not grow a mixture. Our assortments are made up with the definite purpose in mind for which the bulbs are to be used. Our assortments are named with this in mind. Our Garden Assortment is a high class merchandisable bulb, suitable for retail sales.

GARDEN ASSORTMENT.....	1.75	1.50	1.30	1.00	.80	.60
CUT FLOWER ASSORTMENT.....	2.00	1.75	1.40	1.20	1.00	.80
FORCING ASSORTMENT.....	2.00	1.75	1.40	1.20	1.00	.80

Sectional view (about one-half) of our Special Display of Gladiolus, Main Entrance, Horticultural Hall, Century of Progress, Chicago, Aug. 22 to Sept. 10, 1934. Pronounced by florists who were attending the F. T. D. Banquet, and by growers and by the public, the finest large display of Gladiolus, considering quality of bloom, arrangement and diversity that they had ever witnessed.

(Right) ALICE HERRIOTT— a rich cherry-rose—fully described on page 7.
(Lower) MARGARET STEWART— a real red-red rose, also fully described on page 7.

The accompanying illustrations show these two colorful varieties of Stewart originations as grown from No. 6 bulbs by an amateur.

Carson R. Stewart
Burg Hill, Ohio
